

11th March 2020

SAEVA vaccination statement

SAEVA would like to remind horse owners to ensure they use a registered veterinarian when vaccination certification by a veterinarian is required by a regulatory body or equestrian discipline, for example vaccinations entered in a passport.

Horse owners are also reminded of the importance of using a registered vaccine.

The only vaccine currently registered in RSA for African Horse Sickness is produced by Onderstepoort Biological Products (OBP).

SAEVA does not support the use of any unregistered vaccine and horse owners should be aware of significant concerns regarding safety and efficacy with these products.
